# Power Module

- Buck regulator power module with integrated shielded inductor
- 28V maximum input voltage
- 2.5A maximum output current
- SCP, OCP, OTP, OVP and UVLO protection
- 4.5mm x 4mm low profile QFN package
- Flip-Chip technology for improved thermal management
- Efficiency up to 91%

# RECOM DC/DC Converter

## RPX-2.5

## 2.5 Amp QFN Package

### Description

The RPX-2.5 is a buck converter with integrated inductor in a tiny 4.5mm x 4mm x 2mm thermally-enhanced QFN package (the smallest in its class). The input range is from 4.5 to 28VDC, allowing 5V, 12V or 24V supply voltages to be used. The output voltage can be set with two resistors in the range from 1.2V up to 6V. The output current is up to 2.5A and is fully protected against continuous short-circuits, output overcurrent or over-temperature faults. The enable pin features an internal pull-up current source, so will operate with open-drain, open-collector, logic gate or switched inputs (leave open if not used).

#### Test Set-up

#### Safe Operating Area

#### Typical operating conditions

Nominal $V_{\text{in}}$	$V_{\text{out}}$	$I_{\text{out, max}}$
24VDC	5VDC	2.0A
24VDC	3.3VDC	2.1A
12VDC	5VDC	2.5A
12VDC	3.3VDC	2.5A
5VDC	3.3VDC	2.5A
5VDC	1.2VDC	2.5A

**Specifications** (measured @  $t_a = 25^\circ\text{C}$ ,  $12\text{V}_{\text{in}}$ ,  $3.3\text{V}_{\text{out}}$ , full load and after warm-up unless otherwise stated, refer to test set up)

### Efficiency vs. output current

$V_{\text{out}} = 3.3\text{VDC}$ ,  $V_{\text{in}} = 12\text{VDC}$

$V_{\text{out}} = 5\text{VDC}$ ,  $V_{\text{in}} = 12\text{VDC}$

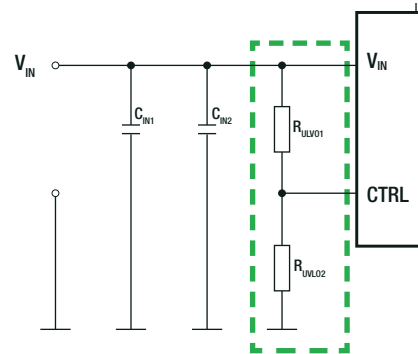

### UNDER VOLTAGE LOCKOUT SETTING

The RPX-2.5 features an internal UVLO circuit that disables the converter until the input voltage exceeds 4.1V typ. This threshold can be raised by adding an external resistor divider  $R_{\text{UVLO1}}$  and  $R_{\text{UVLO2}}$ .

#### Standard Resistor Values

VIN UVLO [VDC]	4.5	10	15	18	20
$R_{\text{UVLO1}}$ [k $\Omega$ ]	68.1	68.1	68.1	68.1	68.1
$R_{\text{UVLO2}}$ [k $\Omega$ ]	25.5	9.53	6.04	4.99	4.42

### OUTPUT VOLTAGE SETTING

The recommended value of  $R_{\text{FBT}}$  is 10k $\Omega$ . The values for trim resistors shown in trim tables below are according to standard E96 values; therefore, the specified voltage may slightly vary. For other output voltages, the value of the required  $R_{\text{FBB}}$  resistor can be calculated using below equation:

- $V_{\text{out,nom}}$  = nominal output voltage [VDC]
- $V_{\text{out,set}}$  = trimmed output voltage [VDC]
- $V_{\text{REF}}$  = reference voltage (6VDC) [VDC]
- $d$  = trim offset (0.6VDC) [VDC]
- $R_{\text{FBT}}$  = Trim resistor (10k $\Omega$ ) [k $\Omega$ ]
- $R_{\text{FBB}}$  = calculated trim resistor [k $\Omega$ ]

continued on next page

**Specifications** (measured @  $t_a = 25^\circ\text{C}$ , 12Vin, 3.3Vout, full load and after warm-up unless otherwise stated, refer to test set up)

**Calculation:**

$$R_{FBB} = \left[ \frac{V_{REF}}{V_{out\_set} - d} \right]$$

**Practical Example:**

$$R_{FBB} = \left[ \frac{6\text{VDC}}{3.3\text{VDC} - 0.6} \right] = 2.22\text{k}\Omega$$

$R_{FBB}$  according to E96  $\approx$  2.21k $\Omega$

**INPUT AND OUTPUT CAPACITOR**

**Input Capacitor**

The RPX-2.5 requires a 10 $\mu\text{F}$  MLCC input capacitor for normal operation. For high transient load applications, an additional 47 $\mu\text{F}$  electrolytic capacitor connected in parallel is recommended, rated for a ripple current of 1.25A or higher.

**Output Capacitor**

The RPX-2.5 requires MLCC output capacitors for normal operation (see table). Transient load reaction time can be improved by adding a speedup capacitor, C<sub>FF</sub> across R<sub>FBT</sub>, but it is not required for normal operation or for output voltages below 2.5V.

Minimum output capacitance			
Set Output Voltage [VDC]		Ceramic Capacitor (C <sub>OUTn</sub> ) [ $\mu\text{F}$ ]	Feed Forward Capacitor (C <sub>FF</sub> ) [pF]
MIN	MAX		
1.2	<1.5	188 (4 x 47 $\mu\text{F}$ )	330
1.5	<2.5	141 (3 x 47 $\mu\text{F}$ )	220
2.5	<3.3	94 (2 x 47 $\mu\text{F}$ )	100
3.3	<5	94 (2 x 47 $\mu\text{F}$ )	100
5	<6	47	100

**Specifications** (measured @  $t_a = 25^\circ\text{C}$ , 12Vin, 3.3Vout, full load and after warm-up unless otherwise stated, refer to test set up)

**CTRL ON/OFF**

The external CTRL input can also be used to disable the converter by pulling the CTRL pin to ground. An internal pull-up current source allows an external switch, open-collector transistor, open-drain transistor or a 3.3V/5V logic gate to be used to drive the CTRL pin. The UVLO adjust and external CTRL functions can be combined.
