Common-mode EMI filter for differential channels with integrated bidirectional ESD protection

Rev. 2 — 14 August 2019

Product data sheet

1. General description

Common-mode ElectroMagnetic Interference (EMI) filters with integrated bidirectional ElectroStatic Discharge (ESD) protection for one, two and three differential channels. The devices are designed to provide low insertion loss for differential high-speed signals on each channel while unwanted common-mode signals are attenuated.

Each differential channel incorporates two signal lines that are coupled by integrated coils. Diodes provide protection to downstream components from ESD voltages up to ± 15 kV on each signal line.

Table 1. Product overview

Type number	Number of channels	Package Name
PCMF1USB3BA/C	1	WLCSP5
PCMF2USB3BA/C	2	WLCSP10
PCMF3USB3BA/C	3	WLCSP15

2. Features and benefits

- One, two and three differential channels common-mode EMI filters with integrated ESD protection
- ESD protection up to ± 15 kV contact discharge according to IEC 61000-4-2
- Superior common-mode suppression over a wide frequency range
- Superior RF performance compared to other integrated filters or discrete filters with external ESD protection
- Extremely high symmetry between line pairs
- Industry-standard Wafer-Level Chip-Scale Packages: WLCSP5, 10 and 15 for smaller footprint

3. Applications

- Smartphone, cellular and cordless phone
- USB3.2, USB2.0, HDMI2.0, HDMI1.4
- General-purpose downstream ESD protection for differential data lines
- Tablet PC and Mobile Internet Device (MID)
- MIPI M-PHY and D-PHY as used in Camera Serial Interface (CSI) and Display Serial Interface (DSI)

The device uses an advanced clamping structure showing a negative dynamic resistance. This snap-back behavior strongly reduces the clamping voltage to the system behind the ESD protection during an ESD event. Do not connect unlimited DC current sources to the data lines to avoid keeping the ESD protection device in snap-back state after exceeding breakdown voltage (due to an ESD pulse for instance).

9. Application information

The device is designed to provide high-level ESD protection for differential high-speed data line pairs such as:

- USB 3.2
- HDMI 2.0
- Transition-Minimized Differential Signaling (TMDS)
- DisplayPort
- external Serial Advanced Technology Attachment (eSATA)
- Low Voltage Differential Signaling (LVDS)

When designing the Printed-Circuit Board (PCB), give careful consideration to impedance matching and signal coupling. Do not connect the protected signal lines to unlimited current sources like, for example, a battery.

Since the SuperSpeed TX/RX lines are separated by GND or VBUS from the Hi-Speed lines, PCMF1USB3BA/C makes it easy to achieve same signal lengths, straight routing, and optimal positioning for ESD protection directly at the connector.
